

Snake Charmer

Wouldn't you want to replace complex keyboard or joystick commands in games or other apps with simple hand gestures which are more similar those finger gestures you know from touch-smartphones?

Special 3D depth cameras will allow you to create an exact model of your hand on the screen which you control by moving your hand naturally. Bend your fingers, move your hand forward, backward or upside down to collect gold coins. As in the real world, be agile and careful to catch the coins, and avoid being bitten by the snake.
