

Intel[®] Server Board SE7501CW2

Tested Hardware and Operating System List

Revision 1.80

October, 2004

Enterprise Platforms and Services Marketing

Revision History

Date	Revision Number	Modifications
March 2003	1.0	Initial Draft
June 2003	1.10	Updated BIOS, added like adapters, added support information on driver support.
July 2003	1.20	Fixed minor spelling changes.
7/1/03	1.30	Updated hard drive information.
August 2003	1.40	Updated driver information on the Promise* FastTrack S150 TX4, and the Adaptec ASC 39320 card.
October 2003	1.50	Updated BIOS, supported Operating System, updated support information on adapters and hard drives
November 2003	1.51	Removed Mitsumi SR244W1 from peripheral list
March 2004	1.60	Updated BIOS, supported Operating System, updated support information on adapters and hard drives (added Mitsumi SR244W1 to peripheral list)
August 2004	1.70	Updated to add Maxtor† Atlas 15K II hard drives
October 2004	1.80	Updated to add Maxtor Atlas 10K V hard drives

1. Introduction

This document is intended to provide users of the Server Board SE7501CW2 with a guide to the different operating systems, adapter cards, and peripherals tested by Intel on this platform.

This document will continue to be updated as new add-in cards, peripherals, and operating systems are tested or until the Server Board SE7501CW2 is no longer in production. Each new release of the document will present updated information as well as continue to provide the information from previous releases.

Intel will only provide support to those add-in cards and peripherals under the specified system configuration (System BIOS) and operating systems and versions to which they were tested.

1.1 Test Overview

Testing performed on the Server Board SE7501CW2 is classified under two separate categories: Compatibility Testing and Stress Testing.

1.1.1 Compatibility Testing

Basic compatibility testing is performed with each supported operating system. Basic compatibility testing validates the server board can be used to install the operating system and that the base hardware feature set is functional. A small set of peripherals is used for installation purposes only. No add-in cards are tested. Testing may include network connectivity and running of proprietary and industry standard test suites.

Extended compatibility testing will occur on only the latest versions of a supported operating system. Extended compatibility testing will test for functionality of a variety of add-in adapters and peripherals. Test applications used will consist of both proprietary as well as industry standard test suites.

The latest version of an operating system signifies the latest supported version at the time of the actual test run. Each new release of this document may have a newly supported release of a given operating system. Previous releases of a supported operating system may not be tested beyond the basic compatibility test process.

1.1.1.1 Basic Installation

Intel commits to provide the following level of customer support for operating systems that receive **Basic Installation Testing**

- Intel will provide and test operating system drivers for each of the server board's integrated controllers, provided that the controller vendor has a driver available upon request. Vendors will not be requested by Intel to develop drivers for operating systems that they do not already support. This may limit the functionality of certain server board integrated controllers.
- Intel will support customer issues that involve installation and/or functionality of operating system with the server board's integrated controllers only if a driver has been made available.
- Intel will NOT provide support for issues related to use of any add-in adapters or peripherals installed in the server system when an operating system that received basic installation testing only is in use.

Support is defined as assistance in root causing issues, and determining a customer acceptable resolution to the issue associated with the operating system. The resolution may include, but is not limited to, on-board controller driver changes, engaging the vendor for resolution, BIOS changes, firmware changes, or determining a customer acceptable workaround for the issue.

1.1.2 Stress Testing

Stress testing is performed only on the most current release of a supported operating system at the time of a given validation run. The stress test process consists of three areas: Base platform, Multiple Adapter, and Endurance.

Base Platform: Each base platform will successfully install a given operating system, successfully run a disk stress test, and successfully run a network stress test.

Multiple Adapters: Multiple adapter validation (MAV) testing uses configurations and test suites to gain an accurate view of how the server performs under varying complex configurations while interacting with network clients. Each configuration is tested for at least 12 hours.

Endurance Test: This test sequence uses configurations that include 2-5 add-in adapters (depending on chassis used) for a minimum 72-hour test run without injecting errors. Three servers operating under Windows* 2000 Advanced Server, Novell NetWare*, and Caldera OpenUnix* are tested in parallel. Each configuration passes an installation test, a Network/Disk Stress test, and tape backup test. Any fatal errors that occur will require a complete test restart.

1.1.2.1 Support Commitment for Adapter / Peripheral Compatibility and Stress Testing

Intel commits to provide the following level of customer support for operating systems that receive Adapter / Peripheral Compatibility and Stress testing:

- Intel will provide support for customer issues with these operating systems involving installation and/or functionality of the server board with or without the adapters and peripherals listed in this document as having been tested under the particular operating system.

- Support is defined as assistance in root causing issues, and determining a customer acceptable resolution to the issue associated with the operating system. The resolution may include, but is not limited to, on-board controller driver changes, engaging the vendor for resolution, BIOS changes, firmware changes, or determining a customer acceptable workaround for the issue.
- Intel will provide and test operating system drivers for each onboard video, network, and storage controller.
- Intel will enable vendors to provide driver support for add-in adapters using these operating systems.
- Intel will go through some of the steps to achieve certification to ensure its customers do not run across any problems, but the actual certification is the responsibility of the individual customer.

For operating systems, adapter cards, and peripherals not listed in this document, there is no support commitment. Intel will consider support requests on a case-by-case basis.

1.2 Pass/Fail Test Criteria

For each operating system, adapter, and peripheral configuration, a test passes if specific criteria are met. Specific configurations may have had particular characteristics that were addressed on a case-by-case basis. In general, a configuration passes testing if the following conditions are met:

- The operating system installed without error.
 - Manufacturer's installation instructions or Intel's best-known methods were used for the operating system installation.
 - No extraordinary workarounds were required during the operating system installation.
 - The server system behaved as expected during and after the operating system installation.
 - Application software installed and executed normally.
- Hardware compatibility tests ran to completion without error.
- Test software suites executed successfully
 - Test and data files were created in the correct directories without error.
 - Files copied from client to server and back compare to the original with zero errors reported.
 - Clients remain connected to the server system.
 - Industry standard test suites run to completion with zero errors reported.

All Server Board SE7501CW2 testing was performed using the Intel® Server Chassis SC5200 BRP, and Intel® Server Chassis SC5250-E chassis. Limited testing of adapters occurred with the Intel® Server Chassis SR1350-E. No specific testing on peripherals has been performed on SC5200 server chassis base version. No specific testing with add-in cards has occurred with the Hot-swap-backplane(HSBP) for SCSI hard-drives in tact.

2. Server Board SE7501CW2 Base System Configurations

The following table lists the base configurations tested. Base configurations will change as new revisions of the Server Board SE7501CW2 is released and/or new system BIOS is cut onto the board in the factory. Each base configuration is assigned an identifier number that is referenced in the tables throughout this document. New base configurations are added with each new release of this document.

Base System Identifier #	Board Type	Part Number	BIOS Revision	Notes
1	SE7501CW2	C30360-001 C26740-302	Ver 1.00	
2	SE7501CW2	C26740-303	Ver 1.03	Supports Intel® Xeon processor Stepping D1 and below.
3	SE7501CW2	C26740-304	Ver 1.06	Supports Intel Xeon processor Stepping M0 and below
4	SE7501CW2	C26740-305	Ver 1.07	Supports Intel Xeon processor Stepping M0 (including XEON 3.2G with 2M L3 Cache) and below

3. Supported Operating Systems

The following table provides a list of supported operating systems for the Server Board SE7501CW2. Each of the listed operating systems was tested for compatibility with a base Server Board SE7501CW2 configuration. Operating system compatibility testing verifies that the operating system will install and function with all on-board devices.

The following table also indicates whether each operating system received Basic Installation Testing, or Adapter / Peripheral Compatibility and Stress Testing. For information on the support commitments for Basic Installation Testing vs. Adapter / Peripheral Compatibility and Stress Testing, please reference Section 1 of this document.

Any variations to the standard operating system installation process are documented in the Installation Guidelines section of this document. If there are no installation guidelines noted in the following table, then the operating system installed as expected using manufacturer's installation instructions or Intel's best-known methods.

Operating System	Base System Configuration Tested & Type of Testing	Notes
Microsoft* Windows* Server 2003 Enterprise Edition / Microsoft Windows Small Business Server 2003	Configuration 2 – Compatibility & Stress Configuration 3 – Compatibility & Stress Configuration 4 – Compatibility & Stress	Intel's testing was completed with Microsoft Windows Server 2003 Enterprise Edition. The Intel Server Board SE7501CW2 supports the operating system portion of Microsoft Windows Small Business Server 2003 only. The application portion is not tested or supported.
Microsoft Windows 2000 Advanced Server, Service Pack 4 / Microsoft Small Business Server 2000	Configuration 1 – Compatibility & Stress Configuration 3 – Compatibility & Stress Configuration 4 – Compatibility & Stress	Intel's testing was completed with Microsoft Windows 2000 Advanced Server. The Intel Server Board SE7501CW2 supports the operating system portion of Microsoft Small Business Server 2000 only. The application portion is not tested or supported.
Red Hat Enterprise Linux* AS 3.0	Configuration 4 – Compatibility & Stress	
Red Hat Linux 9.0 (2.4.20-8)	Configuration 2 – Compatibility & Stress Configuration 3 – Compatibility & Stress	
Red Hat Linux 8.0	Configuration 1 – Compatibility & Stress	
Novell NetWare* 6.5, Support Pack 2	Configuration 4 – Compatibility & Stress	
Novell NetWare 6.0, Support Pack 2	Configuration 1 – Compatibility & Stress Configuration 3 – Compatibility & Stress	
Caldera OpenUnix* 8.0, MP 3	Configuration 1 –	

Operating System	Base System Configuration Tested & Type of Testing	Notes
	Compatibility & Stress	

3.1 Operating System Certifications

Listed below are the operating systems that Intel will certify Server Board SE7501CW2. However, the customer is responsible for their own certification from the individual operating system vendors. In many cases, the customer may leverage their operating system certifications from Intel's testing. See the "Comments" section next to each operating system in the table below for additional information. Intel's certifications, pre-certification, and operating system testing may help reduce some of the risk in achieving customer certifications with the operating system vendors.

Operating System	Certification Listing	Comments
Microsoft Windows* 2000 Advanced Server / Microsoft Windows* Server 2003	Intel® SE7501CW2 Server SID#713385	OEM must request certification by Microsoft for their specific product. < http://www.microsoft.com/hwdg/hcl.search.asp > (Search on SE7501CW2) http://developer.intel.com/design/servers/whql.htm
Novell NetWare* 6.0	Intel® SE7501CW2 Server	Novell checks Intel's test results, certifies (if appropriate), and posts the certificate on their web site. Customer can leverage the Intel certification, if customer product meets the operating system vendor standard. < http://developer.novell.com/nss/nss_advanced_search.jsp >
Red Hat Linux 8.0	Intel® SE7501CW2 Server	< http://hardware.redhat.com/hcl/?pagename=hcl >

4. Adapters and Peripherals

Add-in adapter card and peripheral compatibility and stress testing will only be performed with the latest version of an operating system at the time the validation testing occurred. The following table shows the operating system and base configurations used to validate each device. The adapters are divided into categories based on their functionality. All integrated on-board devices are tested by default and are therefore not included in the following tables.

Note that not all adapter cards were tested under all operating systems. The following notation is used in the tested adapters and peripherals table below to indicate the support level that Intel provides for a particular adapter under a particular operating system:

Number (i.e. 1)	This adapter or peripheral has been tested and is supported under the specific configuration identified in the Base System Configurations Table in Section 2 of this document.
Number in brackets (i.e. [1])	This adapter or peripheral has been tested, but is NOT supported under the specific configuration identified in the Base System Configurations Table in Section 2 of this document.
NT	This adapter or peripheral has not been tested under this operating system and is not supported under this operating system.
ND	This adapter or peripheral has not been tested under this operating system due to limitations in IHV driver availability, and is not supported under this operating system.
SA (Similar Adapter)	This adapter is supported, but not tested. This adapter model has not been tested with this server board, but Intel will support it based on successful testing of a similar adapter from the same adapter family. Intel has high confidence that this adapter will function correctly with the server board. This adapter uses the same firmware and drivers, and has a nearly identical system interface to another adapter of the same family that has been successfully tested with this server board. In addition, Intel has secured IHV commitment to support the similar adapters equally. Customers should always test adapters as part of the final system configuration prior to deployment. All installation guidelines for the tested adapter also apply to the similar adapter.

Any variations to the standard adapter installation process or to expected adapter functionality are documented in the Installation Guidelines section of this document. If there are installation guidelines affecting a particular adapter and operating system combination, these are referenced in the following table. If there are no installation guidelines noted in the following table, then the adapter installed and functioned as expected using manufacturer's installation instructions or Intel's best-known methods.

Testing of adapters cards normally is performed with unused add-in adapters and onboard controller expansion ROMs disabled in BIOS Setup. Intel recommends that customers disable the option ROM for add-in controllers and/or the on-board controllers when not booting from the controller or needing to use its built in utilities.

5. Hard Disk Drives

The hard drives listed in the following table have been tested with the Server Board SE7501CW2 by Intel in its validation labs and/or by individual drive vendors. The following operating system identifiers are used in the table to specify which OS each drive was tested under.

Identifier number	Operating System
1	Microsoft Windows* 2000 Advanced Server SP4
2	Novell NetWare* 6.0 SP2
3	Red Hat Linux* 8.0
4	Caldera OpenUnix* 8.0
5	Microsoft Windows* Server 2003 Enterprise Edition
6	Red Hat Linux* 9.0
7	Novell NetWare 6.5 SP2
8	Red Hat Enterprise Linux AS 3.0

Note that not all hard drives were tested under all operating systems. The following notation is used in the tested hard drives table below to indicate the support level that Intel provides for a particular hard drive with a particular operating system:

Number (i.e. 1)	This hard drive has been tested and is supported under the operating system identified by the operating system identification number.
Number in brackets (i.e. [1])	This hard drive has been tested, but is NOT supported under the operating system identified by the operating system identification number.
SD (Similar Drive)	The hard disk drive is supported, but not tested. This hard drive model/capacity has not been tested with this server board, but Intel will support it based on successful testing of a larger capacity hard drive from the same hard drive family. Intel has high confidence that this hard drive will function correctly with the server board. This drive uses the exact same firmware and drivers as a larger capacity hard drive that has been successfully tested with this server board. The only difference between this drive and the one that was used in testing is the storage capacity. Intel provides the same level of support for all hard drives listed in this document, regardless of whether the drive was tested or not. Customers should always test hard drives as part of the final system configuration prior to deployment. Given the fact that a larger capacity hard drive from the same drive family has successfully completed testing on this server board, this particular hard drive capacity point will not be tested.
IHVT (IHV Tested)	The hard disk drive was tested according to Intel-approved guidelines and test procedures by the Independent Hardware Vendor (IHV) that manufactured the drive. Intel provides the same level of support for all hard drives listed in this document, regardless of whether the drive was tested in an Intel lab or not. IHV test reports remain the property of the IHV (Intel cannot provide copies of these reports).
